SUMMARY

Software engineer with 3+ years of focus on building high-performance systems and creating powerful tools to support effective pipelines. Experienced in Python and C++, with a track record of operational excellence across low-level architecture, data-oriented pipelines, robust automated testing, and AI-powered workflows.

PROFESSIONAL EXPERIENCE

CLO Virtual Fashion — *Web Graphics Engineer*

01/2023—Present

- Designed and deployed an LLM-powered agentic process that receives Jira tickets and automates the full software development lifecycle — delivering, on average, 2 PRs per week
- Built a Python dashboard to ingest network telemetry from AWS OpenSearch, identified pipeline bottlenecks from the insights, and refactored geometry data to boost loading by 22% for users
- Engineered network error resilience tests that inject mid-load request failures for assets, verifying correct error reporting and absence of memory leaks under failure
- Architected a cross-platform C++ render engine from the ground up, owning data pipelines and object-oriented design; prototype adopted as the foundation for the company's next-generation render engine
- Created GPU benchmarking and structured logging pipelines on AWS S3, enabling data-driven analysis
- Implemented and benchmarked multiple transparency algorithms, increasing rendering speeds by 15%
- Collaborated with an international team using Agile methodologies to resolve user-reported issues

Aspyr Media — *Associate Technical Artist*

07/2022—01/2023

- Developed a Python tool to enforce asset naming conventions, versioning, and file storage standards across teams, improving pipeline consistency and scalability

Corvid Technologies — *Software Engineer Intern*

05/2021—08/2021

- Automated preprocessing workflows for high-fidelity 3D assets integrated into Unreal Engine
- Built PyQt and Unreal Python API tools to streamline import/export pipelines of levels

EDUCATION

The University of Texas at Austin

Bachelor of Science in Computer Science

Spring 2022

SKILLS

Languages: C++, Python, Typescript/Javascript, Java, C#, Rust

Development: Git, Playwright, Plotly, Pandas, Qt, React

Cloud & Infrastructure: AWS S3, AWS RDS, AWS OpenSearch, Azure Pipeline

PROJECTS

AI Agent Wargame Simulator — *Full Stack Developer*

- Integrated the Claude API to instantiate NPC commanders with distinct personas, simulating autonomous decision-making based on character traits and battlefield context
- Used the Claude API to reformat player commands into structured, period-accurate military orders, enforcing format consistency and improving player immersion
